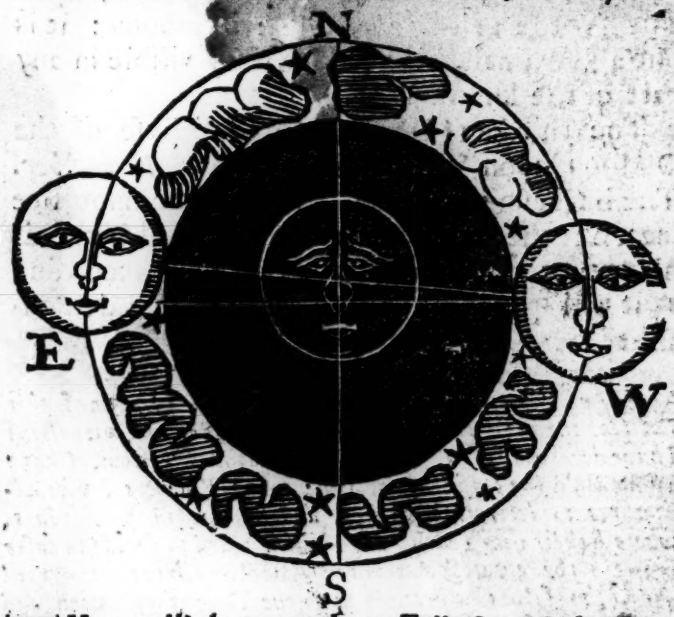
Of



THere will happen three Eclipſes of the Luminaries this Year, 1667. *viz.* One of the ☉ Sun, and two of the ☽ Moon: Of which three, one only, (and but a part of it neither) will be viſible to the Inhabitants of Great *Brittain*, which is the laſt Eclipſe of the ☽ Moon, the 20 of *November*.

The firſt Eclipſe that happeneth this Year, is a totall Eclipſe of the ☽ Moon, upon Munday the 27 of *May*, between 10 and 11 in the forenoon; it will be inviſible to us, and wil only ſhew it ſelf

to the people in *Insulis Lucayos*, *Lavezina*, *Salomonis*, *Philipinæ*, *Virginiæ*, &c.

The ſecond, is an Eclipſe of the ☉ Sun, upon Tueſday the 11 of *June*, in the afternoon: it is but a very ſmall Eclipſe and hardly viſible in any part of the known World.

The third and laſt, is a totall Eclipſe of the ☽ Moon, upon Wedneſday the 20 of *November*. The beginning thereof at *Edinburgh*, cannot bee ſeen, but the end of it may be obſerved if clouds hinder not. The true type thereof (according as it will appear in the Heavens) is here demonſtrated.

Having Typically repreſented to thy view the form of this Eclipſe, thy eye may afterwards be both judge and witneſſe if I have deceived thee: As for Predictions therefrom, I have not attain'd the confidence of ſome young Prophets, who adventures to determine Things and Times in particulars, wherein their very Teachers are in doubt, and to decide in caſes wherein the greateſt Patrons of Aſtrology *have not agreed among themſelves, eſpecially as to the Time of operation and continuance of effects of* Solar *and* Lunar *Eclipſes, which my forbearance, as it begets no expectation, ſo conſequently no diſappointment either to thee or my ſelf. As things ſhall ſtand forth in their ſeaſon, I believe they will be as already they have been, viz. a diſappointment to many ſmall Prophets, who deduce their judgement from ſuch doubtful Foundations; for who hath not lately known Great Things talked off, that never came to paſſe, and Great Things come to paſſe, that hath not been talked off, to the manifeſt ſhame of Intruders into things they have not ſeen, and their Palpable Ignorance of things that are: Seek therefore true contentment with things preſent, and that will expell Anxiety concerning things to come. Let this be thy place, and thy minde ſhall be in peace.*

The

The exact day, hour and minut of the New Moon, her Full and Quarters: With the daily disposition of the Weather; with the whole Fairs of *Scotland* for the Year, 1667.

xxxi. January begins on Tuesday.

Helins *day at Grinock* 15 *day, Margaretmeſſe in Dumfermling* 16 *day*, S. Machharmuch *in Tane and Auchtertuil* 22 *day*, Bruntiland 23. S. Andrew *in* S. Johnſtoun, Peebles *and Chirnſide* 30 *day.*

Decem.

1651. December begins on Sunday.

New moon 5 day, 21 min. past 8 in the morning.
First quarter 12 day, 33 min. past 5 in the morning.
Full moon 20 day, 49 min. past 9 in the morning.
Last quarter 28 day, 32 min. past 3 in the morning.

This month begins with great frosts and snow till the 8 day, from the 8 to the 13 dark rainy weather, from the 13 to the 18 intemperate stormes, from the 18 to the 23 great snow, from the 23 to the end of the month frost.

Saint Nicolas in Aberdene 7 day, Lady day in Westweems 8 day, S. Dustane in Bamff, and at the Kirk of Diere 14 day, S. Cuthbert in the Grange, within the Sheriſdom of Linlithgow the 17 day, S. Thomas in Glasgow the 15 day, S. Johns day in Bamff, Forres, Levens-mouth 27 day.

WE shall here further shew the Reader, that there are twelve Signs in the Zodiack (which is a great Circle that divides (obliquely) the Equinoctial into two equal parts) whose Names and Characters as followeth.

Aries ♈, Taurus ♉, Gemini ♊, Cancer ♋, Leo ♌, Virgo ♍, Libra ♎, Scorpio ♏, Sagittary ♐, Capricornus ♑, Aquary ♒, and Pisces ♓.

These first six are called northern Signs, the latter six Southern Signes: Every Sign contains 30 degrees, every degree being 60 min. every min. being 60 sec. each second 60 thirds, &c. unto tenths.

These

These 12 Signs are [illegible] into 4. triplicities,

For ♈ ♌ ♐ / ♉ ♍ ♑ / ♊ ♎ ♒ / ♋ ♏ ♓ is the Fiery, Earthly, Airy, Watry tripliciy and in quality: hot & dry, cold & dry, hot, moist, cold, moist.

There is also seven Planets, whose names and Characters are these, *viz.* Saturn ♄, Jupiter ♃, Mars ♂ Sol ☉ Venus ♀, Mercurius ☿, Luna ☾.

These seven *P*lanets in their motions through the 12 Signs do make several Angles and mutual Aspects (from whose influence the Generation and Corruption of all Sublunaries are caused ☽) and they are five especially, *viz.* Conjunction ☌, Sextile ⚹ Quartile □, Trine △, and Oppositon ☍.

Astrologers uses these two Characters also, *viz.* the Dragons head ☊, and Dragons tail ☋, (which is nothing else but the intersections of the Moons ☾ orbite with the Ecliptick) but this Dialect is something too superlative for vulgar Capacities.

The use of this Table, and the practical part thereof is this, with the 5, 10, 15, 20, 25, or 30 day of your Month: Enter this Table, finding the respective Dayes on the top, and Months on the Margent; and in the common Angle, you will find the exact time of the Suns ☉ rising for the saids dayes; and by the Rule of Proportion, for any other intermediate day.

Example, I desire to know the exact time of the Suns ☉ rising the 15 day of *March*, I look in the Table, and I find that the Sun ☉ rises 48 min. past 5 in the morning: In like manner the 25 day of *March* he rises 24 min. past 5 in the morning, and the 25 of *April*, he rises 15 min. past 4 in the morning, &c.

A Table shewing the exact time of the Suns rising every fifth day, exactly calculated for the Latitude of 56. degrees, 20. min.

Names of the Months.	The dayes of each Moneth. 5 day	10 day	15 day	20 day	25 day	30 day
Ianuary	8 21	8 12	8 3	7 53	7 42	7 29
February	7 18	7 6	6 55	6 43	6 31	
March	6 12	6 0	5 48	5 36	5 24	5 10
April	4 58	4 48	4 36	4 26	4 15	4 5
May	3 55	3 47	3 39	3 32	3 26	3 21
Iune	3 18	3 17	3 18	3 23	3 23	3 28
Iuly	3 35	3 42	3 50	3 59	4 9	4 19
Auguſt	4 32	4 42	4 54	5 5	5 17	5 28
September	5 42	5 54	6 3	6 17	6 29	6 41
October	6 52	7 4	7 16	7 27	7 38	7 49
November	8 1	8 11	8 20	8 27	8 34	8 39
December.	8 42	8 43	8 42	8 40	8 36	8 31

Time of the Suns riſing in hours and min.

The day is ſaid to be more then 12 hours long, during the time the Sun ☉ moves from the Venerall Equinoctiall Aries ♈, untill he come to the Autumnal Equinox Libra ♎, (which is from the 9 or 10 of *March*, to the 11 or 12 of *September*) and ſo proportionably diminiſheth in length from the ſaids Autumnall Equinox, untill he return to the Vernal Equinoxiall point ♈, (which is from the 11 or 12 of *September*, untill the 9 or 10 of *March*) during which time the day is ſaid to be leſſe then twelve hours long.

The

The use of the following Table is this, First finde the age of the Moon ☾ on the last page, with which age of the Moon ☾ so found, enter this little Table, and there (by inspection onely) it will shew you the hour and minut of full sea at Leith.

A Table shewing the hour and minut of high water at *Leith* for every day of the Moons age, increasing or decreasing.

Moons age { deer.	min.	Full Seaat *Leith* in hours & min.	
1	16	2	44
2	17	3	32
3	18	4	20
4	19	5	8
5	20	5	56
6	21	6	44
7	22	7	32
8	23	8	20
9	24	9	8
10	25	9	56
11	26	10	44
12	27	11	32
13	28	12	20
14	29	1	8
15	30	1	56

As for Example, the 17 of *April* this Year 1667. I finde the age of the Moon in the succeeding Table to be four dayes old, with which four (for the Moons age) I enter this little Table, and I find the same age of the Moon ☾ 4, and over against it, I see 5, 8, *viz.* 5 hours, 8 minuts, signifying that 8 minuts past 5 in the morning (or afternoon) the 17 day of *April* 1667. it will bee full sea or high water at *Leith*.

Another Example, I demand the time of full sea at *Leith* the 22 day of *June* 1667. On which day (by the succeeding Table) I finde the Moon 11 dayes old, which I seek in this small Table, and over against it is 10, 44, that is, 44 minuts past 10 in the morning (or evening) the 22 of *June* 1667. it will be full sea or high water at *Leith*.

The

A Table shewing the Age of the Moon every day throughout this year, 1667.
